

Exam Description - BU5300 IT Project Management

The purpose of this exam is to demonstrate your ability to plan, justify, and communicate the IT project plan, using concepts from the course.

In this portfolio exam, your group will develop a professional proposal for an IT/IS business-oriented project that reflects real-world problem or opportunity. The elements of the project plan correspond directly to the assignments and activities you completed throughout the semester. Your task in the final submission is to build upon those earlier deliverables and refine them, using the feedback provided, into one coherent project proposal.

Each group delivers one joint project document (8–10 pages, excluding appendices) and each student delivers an individual reflection (1 page).

Group Deliverable: **Project Proposal** (8–10 pages)

Your proposal must include the following components:

1. Executive Summary

- What is the problem?
- What is your proposed solution?
- Who are the target users/customers?
- What value will the project create?

2. Business Case

- Description of the problem or opportunity
- Proposed solution and why it is viable
- Expected benefits (qualitative and/or financial)
- Cost estimate (high-level)
- Main alternative(s) considered

3. Project Charter

- Project objectives
- Scope (in scope / out of scope)
- Success criteria
- Team roles and responsibilities
- Key assumptions and constraints

4. Project Plan

- Chosen project approach with short justification
- Work Breakdown Structure (WBS) with work packages
- Timeline with milestones (Gantt or milestone table)
- Resource and effort estimates per work package

5. Risk Analysis

- Top project risks with likelihood, impact, and mitigation strategy

6. Stakeholder Analysis

- Key stakeholders: their interests and communication needs

7. Change Management Strategy

- Identify one significant anticipated change (e.g., requirement, budget, technology, stakeholder)
- Describe: Why may it occur? Who is affected? How would the project manage or respond to the change?

8. Funding & Budget Summary

- Total estimated cost
- How funds will be allocated
- Why external support/funding is needed

Individual Deliverable: Reflection Note (max 1 page)

Each student must submit a personal reflection discussing:

- Their specific contributions to the project
- Lessons learned about IT project management
- How the course content and feedback informed their decisions
- What they would do differently in future projects

This reflection should show critical thinking, not a summary of the course.
