

## PJ6100\_PGR306 GROUP PORTFOLIO EXAM

The assignment is to be addressed in groups (3-5 students). The purpose of the exams is to test the learning outcomes of the course.

Module leader(s) and e-mail:

Kjeld Hansen – [kjeld.hansen@kristiania.no](mailto:kjeld.hansen@kristiania.no) (lecturer & course responsible)

The group portfolio exam consists of four parts, which must all be addressed. When you address a part of the exam, please do clearly mark which part you are responding to (Example: A response to part 1, should be marked with 1.)

---

### Exam: Developing a research proposal

Developing a research proposal is an integral part of the academic research process and consists of several tasks. The aim of this assignment is to draw upon what you have learned so far and identify a topic you would like to focus your investigation on. You will need to think through how you can develop a strategy and apply your methods in order to carry out your investigation systematically.

You are free to choose any research area that you find interesting from your field of study or related fields as long as it contains an IT aspect. This is also an opportunity for defining, planning and working on a topic relevant for your Bachelor's thesis.

*A research proposal might include the following elements:*

- The research topic – your chosen area of research.
- The research problem that you are trying to address and the importance of that problem?
- The research objective – what do you want to find out and what is your goal with this particular research proposal?
- The potential research question(s) of your planned study.
- An outline of the background for the investigation based on related and prevailing knowledge relevant for your study.
- A description of the research strategy and method(s) you propose to use to address your research problem and question. Please, do state your argument for the choices you make and explain how they are appropriate in terms of your research objective and question.
- A discussion of the proposed plan and preparation of the data collection (i.e. what type of data should be collected, size, granularity and type of sample, time estimations for data collection, etc.).
- A discussion of how you propose to analyse and interpret the data.
- A discussion of the potential limitations of your planned study, and how they could potentially impact the quality of your results.
- A discussion of the ethical implications of your study and data collection.
- A discussion of your expected contributions to research and/or practice.

This is not an exhaustive list. You may include other relevant information that you believe is important to explain your research proposal and the choices you make. It is important that you can justify all of your choices and answer the 'why' question in relation to the points listed above.

## **Part I: Developing the research problem, aim and objective**

Give a brief description of the project's background. You must document familiarity with the prevailing knowledge in your research field as well as the key challenges residing in the field. Describe your project's originality, importance, as well as how it might contribute to solve a practical (and – if applicable – academic) problem. For example: will the project help to solve needs and challenges for a business? State your research aim and objective – and if applicable, your research question.

## **Part II: Discovering and applying existing knowledge**

Develop a plan for how you would like to investigate the related and prevailing knowledge relevant for your study. Develop an initial structure for searching the literature based on keywords and Boolean operators. Suggest relevant data bases for conducting your searches. Report initial results including criteria of relevance for including or excluding existing knowledge in your project. Present your initial results in a relevant table and outline your initial analysis.

## **Part III: Constructing your research strategy**

Present your research strategy and methods for achieving the aim and objective of your research proposal. Justify your choice of approach and explain how it is suitable for investigating the research objective. Explain how you intend to collect the data you need and how you intend to analyse it in order to advance your project.

## **Part IV: Critically evaluating your approach**

Discuss and evaluate how your overall approach will help you to complete your project. Offer informed reflections on data analysis and interpretations, possible opportunities and limitations as well as the ethics of the study. Finally, do discuss the intended contributions to practice (and – if applicable – academia), and demonstrate why your research project should be interesting to others.

---

The written home exams should be written at a level that reflects the lectures, reading materials and an expanded literature search. The research proposal should therefore also be reflective of the possibility that you could be able to take part in it yourself if it was to become reality. For example, if you were to carry it out in your Bachelor's thesis.

### **Formatting:**

The exams report should be in accordance with Kristiania University College's policies.

The exams report should include relevant references to literature incl. the course curriculum.

### **Language:**

The exams report may be written in either Norwegian, Swedish, Danish or English.

### **Word limit:**

The exams report should not exceed 5.000 words (excluding front page and references).

### Section Weights:

Part I: 25

Part II: 25

Part III: 25

Part IV: 25

**Total: 100**

### Informal Grading Criteria

Marks (Grade)

=>90 (A)

80-89(B)

70-79 (C)

60-69 (D)

50-59 (E)

<49 (F)

### Grading

The assignment is worth 100 % of the grade of the course.

| Assessment Criteria* Grade | Learning Outcome 1: Knowledge                                           | Learning Outcome 2: Skills                                       | Learning Outcome 3: Competence                                    |
|----------------------------|-------------------------------------------------------------------------|------------------------------------------------------------------|-------------------------------------------------------------------|
| A<br>Excellent             | Excellent and comprehensive understanding of theory                     | Demonstrates excellent analytical, technical and writing skills  | Outstanding degree of judgment and independent critical thinking  |
| B<br>Very good             | Very good understanding of theory                                       | Demonstrates very good analytical, technical and writing skills  | Sound degree of judgment and independent critical thinking        |
| C<br>Good                  | Good understanding of theory in most important areas                    | Demonstrates good analytical, technical and writing skills       | Reasonable degree of judgment and independent critical thinking   |
| D<br>Satisfactory          | Satisfactory understanding of theory, but with significant shortcomings | Demonstrates limited analytical, technical and writing skills    | Limited degree of judgment and independent critical thinking      |
| E<br>Sufficient            | Meets the minimum understanding of theory                               | Demonstrates sufficient analytical, technical and writing skills | Very limited degree of judgment and independent critical thinking |
| F<br>Fail                  | Fail to meet the minimum academic criteria.                             | No demonstration of analytical, technical and writing skills     | Absence of judgment and independent critical thinking             |
