

Instructions for Portfolio Exam

BU5300 – IT Project Management

The portfolio exam is a group-based project designed to assess your understanding of IT Project Management concepts by applying them to a project scenario.

Group Work Requirements

- You will work in groups of 5-8 students.
- Try to form groups with students from different programs, as this often leads to more complete and innovative projects.
- Group dynamics and collaboration are your responsibility. Any participation issues must be reported earlier to the teacher or student office to ensure fair assessment.

Deliverables

Portfolio Documents

- You will deliver a folder containing all the documents developed during the course.
 - o The portfolio consists of 10 assignments, each described in the subject material.
 - o All assignments must be completed and included.
- Ensure that you have incorporated the feedback received during the course.
- You are not required to submit one document per assignment. For example, documents like the Project Charter or Initiation Document may cover multiple assignments.

Personal Reflection Note

Each student must submit a personal reflection note as part of the portfolio. This note is essential and must be included; failure to submit it will result in no grade being awarded.

The reflection should include:

- Your contributions to the group work.
- Insights gained throughout the project.
- Challenges faced and how they were overcome.
- What you learned about IT Project Management and collaboration.

Submission Guidelines

- Compile all your project materials into a single folder.
- Include the personal reflection note as a separate document within the folder.
- Submit the folder by the deadline specified in Wiseflow.

Note: There will be no plagiarism check for these common project documents, as this is a collaborative effort across the different students within the group. Individual reflection notes must be original. Plagiarism will still be checked for work copied from external sources.

Assessment Criteria

The portfolio will be graded on a scale of A-F based on the following criteria:

1. Completeness:

- All 10 assignments are included and reflect the project development stages.

- Incorporation of feedback received throughout the course.

2. Presentation of the Project:

- Feasibility, coherence, and professionalism of the project deliverables.
- Logical progression of work across assignments.

3. Self-Reflection and Participation:

- Individual reflection notes.
- Demonstration of critical thinking and learning outcomes.

Excellence Criteria

Excellence will be awarded to groups that go beyond the course requirements and demonstrate:

- Projects that could realistically be pursued outside the course (e.g., as an innovation project or startup idea).
- Unique and well-thought-out solutions to project challenges.

Grading

Grade Requirements

A	Exceptional - All 10 assignments are completed with outstanding quality. - Incorporates feedback, with evidence of improvement. - Project deliverables are coherent, with logical progression across assignments. - Self-reflection demonstrates deep critical thinking and significant personal or team growth. - Goes beyond course requirements, with potential for real-world application or innovation.
B	Very Good - All 10 assignments are included, with minor gaps in quality or detail. - Incorporates feedback, with evidence of improvement. - Project deliverables are coherent, though some areas could be improved. - Self-reflection demonstrates critical thinking but lacks depth in some sections.
C	Satisfactory Work - At least 8 assignments are included, with moderate gaps in quality or detail. - Limited incorporation of feedback and improvement. - Project deliverables show coherence but lack polish or logical progression. - Self-reflection is present but lacks depth critical thinking.
D	Passing Work - At least 6 assignments are included, with significant gaps in quality or detail. - Minimal incorporation of feedback and little improvement. - Project deliverables are incomplete, with unclear coherence or feasibility. - Self-reflection is superficial and demonstrates limited critical thinking or personal growth.
E	Insufficient Work - Fewer than 6 assignments are included, with serious gaps in quality and detail. - No incorporation of feedback. - Project deliverables lack coherence and progression. - Self-reflection is absent or extremely superficial.
F	Failing Work - Fewer than 5 assignments are included, or the portfolio fails to meet the course objectives. - Feedback is ignored or absent. - Project deliverables are missing or severely incomplete, with no coherence. - Self-reflection is absent or irrelevant.

Final Notes

This portfolio exam is an opportunity to apply the knowledge and skills acquired during the course to a practical IT project. Plan your work carefully, manage group responsibilities effectively, and ensure all deliverables are of high quality.

If you have any concerns or issues during the project, do not hesitate to reach out to the course instructor or teaching assistants.

Good luck!
