

Exam Evaluation Guide PGR 213

	Adaptability and Creativity	Technical Proficiency and Understanding	Case Relevance and Presentation Structure
A	Modifies and adapts the course materials to suit the case, shows some originality or creativity	Shows excellent technical understanding with very few mistakes Implemented algorithms and circuits are relevant, technically correct and complete	Presentation thoroughly addresses the case and is structured in a logical way
B	Modifies and adapts the course materials to suit the case	Shows excellent technical understanding with very few mistakes Implemented algorithms and circuits are relevant, technically correct and complete	Presentation thoroughly addresses the case and is structured in a logical way
C	Makes some minor modifications/extensions to the course materials	Shows a fair amount of technical ability and understanding, with some mistakes and misunderstandings Implemented algorithms and circuits are relevant and contain minor flaws / missing components	Presentation is relevant to the case and structured in a logical way
D	Very limited or no adaption of course materials	Shows some technical ability and understanding, with some mistakes and misunderstandings Implemented algorithms and circuits are relevant, contain major flaws and or are very incomplete	Presentation is relevant to the case. Structure and logic of presentation are somewhat scattered and or ineffective.
E	Very limited or no adaption of course materials	Shows a limited technical proficiency with many mistakes and misunderstandings Implemented algorithms and circuits are relevant but contain major flaws	Presentation addresses the case in a very superficial and or limited way. Structure and logic of presentation are scattered and ineffective.
F	Very limited or no adaption of course materials	Shows a complete lack of technical proficiency and thorough misunderstanding of quantum computing	Presentation does not address the case
